**Fund Volatility Ratings (FVR) Definitions**

**S1** A fund that exhibits low volatility of returns. Within this category, a fund may be designated with a plus sign (+). This indicates its extremely low volatility of monthly returns.

**S2** A fund that exhibits low to moderate volatility of returns.

**S3** A fund that exhibits moderate volatility of returns.

**S4** A fund that exhibits moderate to high volatility of returns.

**S5** A fund that exhibits high to very high volatility of returns.

FVRs reflect our view of the fund's sensitivity to interest rate risk, credit risk, and liquidity risk, as well as other factors that may affect returns such as use of derivatives, use of leverage, exposure to foreign currency risk, and investment concentration, and fund management.

FVRs typically accompany FCQRs (e.g., 'A1/S3') to communicate our opinion of risks not addressed by FCQRs. For some funds, we may assign an FCQR without an accompanying FVR. When this occurs, we note the FVR as NR (not rated).
